Where boundaries coincide the symbol shown is the first applicable in the table above, e.g.

For Ordnance Survey purposes County Boundary is deemed to be the limit of the parish structure whether or not a parish area obtains.

New boundary symbols adopted for England and Wales 1974.

Made and published by the Director General of the Ordnance Survey, Southampton.

AREAS

Area measurement is in plan edge only.
The number and area, in hectares (ha) and acres, is shown within each parcel of land.

4267 ..... parcel number
EXAMPLE: 1·809ha ..... area in hectares
4·47 ..... area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.
Enclosures or fastenings joined for measurement of area ..... ‡
Limit of area within which individual parcels are not shown ..... †

To convert hectares to acres multiply by 2·471 05
To convert acres to hectares multiply by 0·404 69

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:—

EXAMPLE from sheet TQ 0529

1. Take the coordinates preceding the sheet number ..... TQ 058
2. Take the coordinate of the grid square in which the point lies and read the figure opposite the line on the north or south margin 058
   Estimate tens of metres from the grid line on the point (distance x) 8
   The resulting four figure number is the Easting 0588
3. Take the coordinate of the grid square in which the point lies and read the figure opposite the line on the east or west margin 291
   Estimate tens of metres from the grid line on the point (distance y) 4
   The resulting four figure number is the Northing 2914
4. The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing ..... TQ 05882914.
