AREAS

Arena measurement is on plan edge only.
The number and area, in hectares (ha) and acres, is shown within each

EXAMPLE: 42/7 ..... parcel number
10·79 ha ..... area in hectares
4·47 ..... area in acres

When identifying a parcel it is important to specify the number of the pla
Enclosures or features joined for measurement of area
Limit of area within which individual parcels are not shown.

To convert hectares to acres multiply by 2·471 05
To convert acres to hectares multiply by 0·404 69

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. T
defining the position of a point to within 10 metres proceed as follows:-

1. Take the two letters preceding the sheet number.
2. Take the west edge of the grid square in which the point lies and read the figures opposite this line on the north or south margin. Estimate tens of metres from the grid line to the point (distance The resulting four figure number is the Easting.
3. Take the south edge of the grid square in which the point lies and read the figures opposite this line on the east or west margin. Estimate tens of metres from the grid line to the point (dis The resulting four figure number is the Northing.
4. The full ten metre reference is given by writing first the Easting followed by the Northing.
