1.829ha area in hectares
4.47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.
Enclosures or features joined for measurement of area
Limit of area within which individual parcels are not shown
To convert hectares to acres multiply by 2.47105
To convert acres to hectares multiply by 0.404686

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows—

EXAMPLE from sheet TQ 0559

1. Take the two letters preceding the sheet number TQ
2. Take the east edge of the grid square in which the point lies and read the figures opposite this line on the north or south margin 058
3. Take the south edge of the grid square in which the point lies and read the figures opposite this line on the east or west margin 291
4. The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing TQ 058 291
