THE NATIONAL GRID REFERENCE SYSTEM
The grid lines form part of the National Grid and are at 1 km intervals
To give a unique reference defining the position of a point to within 100 metres proceed as follows:
1. Take the two letters preceding the sheet number
2. Take the west edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin
3. Take the south edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin
4. The full 100 metre reference is given by writing first the letters, followed by the Easting and then by the Northing

NORTH POINTS
At the eastern edge of this sheet true north is 0° 07' west of grid north and at the western edge 0° 03' west of grid north. Magnetic north is estimated as 6° west of grid north for 1984 decreasing by about 6" in three years
