THE NATIONAL GRID REFERENCE SYSTEM

The grid lines form part of the National Grid and are at 1km intervals.

To give a unique reference defining the position of a point to within 100 metres proceed as follows:—

1. Take the two letters preceding the sheet number — TQ
2. Take the west edge of the grid square in which the point lies and read the figures opposite this line on the north or south margin..... — 06
   Estimate tenths eastwards from the grid line to the point (distance e)..... — 8
   The resulting three figure number is the Easting... — 068
3. Take the south edge of the grid square in which the point lies and read the figures opposite this line on the east or west margin..... — 29
   Estimate tenths northwards from the grid line to the point (distance n)..... — 6
   The resulting three figure number is the Northing... — 296
4. The full 100 metre reference is given by writing first the letters, followed by the Easting and then by the Northing..... — TQ 068296

EXAMPLE from sheet TQ 02 NE

At the eastern edge of this sheet True North is 0° 20' West of Grid North and at the western edge 0° 17' West of Grid North. Magnetic North was about 7° West of Grid North in 1978 decreasing by about ½° in three years.
