AREAS

Area measurement is to plan edge only.

The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4267 parcel number

1 809ha area in hectares

4 47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.

Enclosures or leases joined for measurement of area 2 451 05

Limit of area within which individual parcels are not shown 7

To convert hectares to acres multiply by 2.471 05

To convert acres to hectares multiply by 0.404 69

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metres intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows: -

EXAMPLE from sheet TQ 0529

1. Take the two letters preceding the sheet number TQ

2. Take the west edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin 058

3. Take the east edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin 0588

4. The resulting four figure number is the Easting 0588

5. Take the south edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin 2916

6. The resulting four figure number is the Northing 2916

7. The full six figure reference is given by writing first the Easting, followed by the Northing and then the sheet number. To give a unique reference for further information see 'An Introduction to the Projection for Ordnance Survey Maps and the National Reference System.'
