NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:

EXAMPLE: 4267.....parish number

1 80711.....area in hectares

4 47.....area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.

Enclosures or features joined for measurement of area.....058

Limit of area within which individual parcels are not shown.....058

The resulting four figure number is the Easting.....058

To convert hectares to acres multiply by 2.47105

To convert acres to hectares multiply by 0.40469
