AREAS

Area measurement is to plan edge only.

The number and area, in hectares (ha) and acres, is shown within each parcel of land.

4267 ..... parcel number

EXAMPLE: 1·809ha ..... area in hectares

4·47 ..... area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.

Enclosures or features joined for measurements of area 1

Limit of area within which individual parcels are not shown 1

To convert hectares to acres multiply by 2·471 05

To convert acres to hectares multiply by 0·404 69

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:—

EXAMPLE from sheet TQ 0529

1. Take the two letters preceding the sheet number ..... TQ
2. Take the west edge of the grid square in which the point lies and read the figures opposite the line on the north or south margin..... 058
   Estimate tens of metres from the grid line to the point (distance m)..... 8
   The resulting four figure number is the Easting 0588
3. Take the south edge of the grid square in which the point lies and read the figures opposite the line on the east or west margin..... 291
   Estimate tens of metres from the grid line to the point (distance m)..... 6
   The resulting four figure number is th' Northing 2916
4. The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing ..... TQ 0588 2916
