AREAS

Area measurement is in hectares only.

The number and area in hectares (ha) and acres, is shown within each parcel of land.

Endorsement or features defined for measurement of area.

Limits of area within which individual parcels are not shown.

To convert hectares to acres multiply by 2.471 05.

To convert acres to hectares multiply by 0.404 69.

NATIONAL GRID REFERENCE

The grid lines form pairs of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:

1. Take the two letters preceding the sheet number. **Example** From sheet TQ 059

2. Take the west edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin. **Example** 058

3. Take the south edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin. **Example** 291

4. The resulting four figure number is the National Grid reference. **Example** 058 291

5. The full six figure reference is given by writing four figures after the four figure number. **Example** 058 291 123
