

One grid square on this plan represents one hectare.

Endures or features joined for measurement of area 5

Limit of area within which individual parcels are not shown 5

To convert hectares to acres multiply by 2.474 05 5

To convert acres to hectares multiply by 0.404 69 5

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point within 10 metres proceed as follows:

1. Take the two letters preceding the sheet number EXAMPLE from sheet TQ 5739
2. Take the west edge of the grid square and read the figures opposite the line on the north or south margin 058
Estimate tens of metres from the line on the east or west margin 291
3. Read the figures opposite the line on the north or south margin 058
Estimate tens of metres from the line on the east or west margin 291
4. Take the south edge of the grid square in which the point lies and read the figures opposite the line on the east or west margin 291
Estimate tens of metres from the grid line to the point (distance $\times 10$) 291
5. Take the easting four figures nearest the point 291
The full six-figure reference is given by writing first the letters, followed by the Easting and then by the Northing TQ 582916

For further information see the introduction to the Projection for Ordnance Survey Maps and the National Reference System.
