Area measurement in hectares (ha) and acres (a).
EXAMPLE: 1.809ha = 4.47a
To convert hectares to acres multiply by 2.47105
To convert acres to hectares multiply by 0.40469

When identifying a parcel it is important to specify the enclosure or feature joined for measurement. Limits of area within which individual parcels are shown.

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:

- Take the two letters preceding the sheet number. **EX**AMPLE from sheet TQ 0539
- Take the west edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin. Estimate tens of metres from the grid line to the point (distance). **058**
- Take the south edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin. Estimate tens of metres from the grid line to the point (distance). **291**
- The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing. **TQ 058291**
