NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point or within 10 metres proceed as follows:
EXAMPLE from sheet TQ 0529

- Take the two letters preceding the sheet number TQ 0529
- Take the west edge of the grid square in which the point lies and read the figure opposite this line on either north or south margin. Estimate tens of metres from the grid line to the point (distance) 058
- Take the south edge of the grid square in which the point lies and read the figure opposite this line on either east or west margin. Estimate tens of metres from the grid line to the point (distance) 291
- The resulting four figure number is the Northing (058) and the Easting (291).

The full ten metre reference is given by writing first the Northing, followed by the Easting and then by the Northing.
