NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:

- Take the first two letters preceding the sheet number. Example: TQ 058
- Take the next edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin. Example: 058
- Take the next edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin. Example: 291
- Take the next edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin. Example: 291

The full 100 metre reference is given by writing first the letters, followed by the Easting and then by the Northing. Example: TQ 058291
