

Made and published by the Director General of the Ordnance Survey, Southampton.

COMPILED DATA

Levelled 1952
Boundaries Jun 1976

1:2500 scale
(a) Surveyed
(b) Reconstructed from former County Series plans and revised
(c) Revised

Surveys of changes since the publication of this plan may be available. Enquiries should be addressed to the Director General or to the local Ordnance Survey office.

HEIGHTS are given in METRES above the Newlyn Datum.
Bench mark lists, which may contain later levelling information and particulars of bench marks to which no values have been shown, are obtainable from the Director General, Ordnance Survey.
The representation of a road, track or path is evidence of the existence of a right of way.
The alignment of tunnels where shown is approximate.

BOUNDARIES

ENGLAND & WALES
County
District
London Borough
Civil Parish (England)
Community (Wales)
Electoral Division
Ward
Consistency (Co or Boro)

SCOTLAND
Region or Islands Area
District
Not shown
Electoral Division
Ward
Consistency (Co or Boro)

Consistent boundaries are shown by the first appropriate symbol above, e.g. Boro Cons. & E.D. Bdy.
For Ordnance Survey Purposes County Boundary is deemed to be the limits of the parish structure whether or not a parish area exists.

AREAS

Area measurement is to plan edge only.
The number and area, in hectares (ha) and acres, is shown within each parcel of land.
Enclosures or features joined for measurement of area.
Limits of area within which individual parcels are not shown.
The resulting four-figure number is the following:
To convert hectares to acres multiply by 2.474609
To convert acres to hectares multiply by 0.404686

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals defining the position of a point to within 100 metres proceed as follows:
1. Take the two letters preceding the sheet number.
2. Take the west edge of the grid square in which the point lies and read the figures opposite the line on that north or south margin. Estimate tenths of metres from the grid line to the point (distance x).
3. Take the south edge of the grid square in which the point lies and read the figures opposite the line on that east or west margin. Estimate tenths of metres from the grid line to the point (distance y).
4. The full ten metre reference is given by joining the letters, followed by the Easting and then by the Northing.
For further information see an introduction to the Projection for Ordnance Survey Plans and the National Reference System.
