

Made and published by the Director General of the Ordnance Survey, Southampton.

COMPILED DATA

Levelled 1952  
 Boundaries Jun 1976

(a) Surveyed  
 (b) Reconstructed from former County Series plans and revised.  
 (c) Revised.

Surveys of changes since the publication of this plan may be available. Enquiries should be addressed to the Director General or to the local Ordnance Survey office.

HEIGHTS are given in METRES above the Newlyn Datum.

Boundary marks which may contain later levelling information and particulars of bench marks to which no values have been shown, are obtainable from the Director General, Ordnance Survey.

The representation on this plan of a road, track or path is no evidence of the existence of a right of way.

The alignment of tunnels where shown is approximate.

SYMBOLS

Non-coniferous trees	Slopes	Site of antiquity
Coniferous trees	Cliff	Culverts
Surveyed trees	Cave entrance	Direction of water flow
Orchard trees	Rock	Pylon
Coppice, oier	Boundaries	Electricity Transmission Line
Scrub	Sloping building	Triangulation station
Roofed building	Roofed building	Traverse station (permanent)
Bracken, rough grassland	Archway	Bench mark
Marsh	Change of boundary marking	Surface level
Salttings	see AREAS notes	Revision point
Roads		Revision point & bench mark coincident

BOUNDARIES

England & Wales	Scotland
County	Region or Islands Area
District	District
London Borough	District
Civil Parish (England)	Noe shown
Community (Wales)	
Electoral Division	Electoral Division
Ward	Ward
Consistency (Co or Baro)	Consistency (Co or Baro)

CONCIDENT BOUNDARIES are shown by the first appropriate symbol above, e.g. Boro Const & E D Bdy

For Ordnance Survey purposes County Boundary is defined to be the limit of the parish structure whether or not a parish area adjoins.

Imperial equivalents for metric boundary markings  
 0.914m = 3ft  
 1.22m = 4ft

Made and published by the Director General of the Ordnance Survey, Southampton.

AREAS  
 Area measurement is to plan edge only.  
 Enclosures or features joined for measurements of area are shown within each parcel of land.

EXAMPLE: 4267 ..... parcel number  
 1-809ha ..... area in hectares  
 4-47 ..... area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features joined for measurements of area are shown within each parcel of land. Limits of area within which individual parcels are not shown.

To convert hectares to acres multiply by 2.471 056  
 To convert acres to hectares multiply by 0.404 686

NATIONAL GRID REFERENCE  
 The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:

EXAMPLE from sheet TQ 0529

- Take the two letters preceding the sheet number: TQ
- Take the west edge of the grid square in which the point lies and read the figures opposite this line on the north or south margin: 058
- Estimate tens of metres from the grid line to the point (distance in metres): 291
- Estimate units of metres from the grid line to the point (distance in metres): 088
- The resulting four figure number is the Easting: 0588
- Take the south edge of the grid square in which the point lies and read the figures opposite this line on the east or west margin: 291
- Estimate tens of metres from the grid line to the point (distance in metres): 291
- Estimate units of metres from the grid line to the point (distance in metres): 088
- The resulting four figure number is the Northing: 2918
- The full ten figure reference is given by writing first the letters, followed by the Easting and then by the Northing: TQ 05882918

For further information see: An Introduction to the Projection for Ordnance Survey Maps and the National Reference System.
