Imperial equivalents for metric boundary markings:
0.91m = 3ft
1.22m = 4ft

AREAS

Area measurements in plan edge only.

The number and area in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4.267 parcel number
4.267ha area in hectares
10.47 acres

To convert hectares to acres multiply by 2.47105
To convert acres to hectares multiply by 0.404686

When identifying a parcel it is important to specify the number of the plan on which it falls.

Limits of area within which individual parcels are not shown.

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows -

1. Take the two letters preceding the sheet number. EXAMPLE: TQ 058

2. Take the west edge of the grid square in which the point lies and read the figures opposite this line on the north or south margin. Estimate tenths of metres from the grid line to the point (distance in metres).

3. Take the south edge of the grid square in which the point lies and read the figures opposite this line on the east or west margin. Estimate tenths of metres from the grid line to the point (distance in metres).

The resulting four figure number is the Northing.

4. The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing.

For further information see "An Introduction to the Projection for Ordnance Survey Maps and the National Reference System."
