

MADE AND PUBLISHED BY THE DIRECTOR GENERAL OF THE ORDNANCE SURVEY, SOUTHAMPTON.

CONVERSION SCALES
HECTARES-ACRES
METRES-FEET

1 Metres = 3.2808 feet
1 foot = 0.3048 metres

One grid square on this plan represents one hectare.

AREAS
Area measurement: (a) to plan edge only.
The number and area in hectares (but not acres) is shown within each parcel of land.

EXAMPLE: 426.7 parcel number
1.809ha area in hectares
4.47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.
Enclosures or features joined for measurement of area.
Limits of area within which individual parcels are not shown.
To convert hectares to acres multiply by 2.47105.
To convert acres to hectares multiply by 0.40469.

NATIONAL GRID REFERENCE
The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows -
EXAMPLE from sheet TQ 0529

1. Take the two letters preceding the sheet number: TQ 0529
2. Take the west edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin. Estimate tenths of metres from the grid line to the point (distance x) The resulting four figure number is the Easting: 058
3. Take the south edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin. Estimate tenths of metres from the grid line to the point (distance y) The resulting four figure number is the Northing: 058
4. The full ten metre reference is given by writing first the Easting, followed by the Northing and then by the lettering: TQ 0582916.
For further information see an introduction to the Projection for Ordnance Survey Maps and the National Reference System.
