VEGETATION CLASSIFICATION
 Where space permits, tree and scrub symbols in woods are shown in groups of four, three or singly to indicate dense, medium, open or scattered density of trees or scrub

COMPILATION DATA
 Levelled: 1957
 Boundaries: Mar 1975
 (b) Oct 1974

HEIGHTS
 Heights are given in METRES above the National Datum. Bench mark lists, which may contain later levelling information and particulars of bench marks to which no values have been shown, are obtainable from the Director General, Ordnance Survey. The representation of a plan of a road, track or path is no evidence of the existence of a right of way. The alignment of tunnels where shown is approximate.

AREAS
 Area measurement is to plan edge only. The number and area, in hectares (ha) and acres, is shown within each parcel of land.
 EXAMPLE: 4.267 parcel number
 1.803ha area in hectares
 4.47 area in acres
 When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features joined for measurement of area. Limits of area within which individual parcels are not shown. To convert hectares to acres multiply by 2.471 05. To convert acres to hectares multiply by 0.404 69.

NATIONAL GRID REFERENCE
 The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:
 1. Take the two letters preceding the sheet number. EX: TQ 058
 2. Take the west edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin. EX: 058
 3. Take the south edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin. EX: 291
 4. The full six-figure reference is given by writing first the letters. The resulting four-figure number is the four-figure reference. EX: TQ 058291
 5. The full six-figure reference is given by writing first the letters, followed by the Easting and then by the Northing. EX: TQ 0582916
