NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:—

EXAMPLE from sheet TQ 0529 SE

1. Take the two letters preceding the sheet number ..... TQ
2. Take the west edge of the grid square in which the point lies and read the figures opposite this line on the north or south margin 058
   Estimate tens of metres from the grid line to the point (distance e) 8
   The resulting four figure number is the Easting 0588
3. Take the south edge of the grid square in which the point lies and read the figures opposite this line on the east or west margin 291
   Estimate tens of metres from the grid line to the point (distance n) 6
   The resulting four figure number is the Northing 2916
4. The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing ..... TQ 05882916.

For further information see 'An introduction to the Projection for Ordnance Survey Maps and the National Reference System'

One grid square on this plan represents one hectare on the ground

To convert hectares to acres multiply by 2·471 05
