NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows—

- Take the two letters preceding the sheet number TQ
- Take the west edge of the grid square in which the point lies and read the figures opposite this line on the north or south margin 058
- Estimate tens of metres from the grid line to the point (distance e) 8
- Estimate units of metres from the grid line to the point (distance n) 0588
- Take the south edge of the grid square in which the point lies and read the figures opposite this line on the east or west margin 291
- Estimate tens of metres from the grid line to the point (distance n) 6
- Estimate units of metres from the grid line to the point (distance n) 2916
- The resulting four figure number is the Northing 2916
- The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing TQ 05882916
