AREAS
The number and area, in hectares (ha) and acres, is shown within each parcel of land.
Enclosures or features joined for measurement of area.
EXAMPLE: 4257 parcel number
1.020ha area in hectares
4.47 area in acres

NATIONAL GRID REFERENCE
The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:
EXAMPLE from sheet TQ 0529

- Take the two letters preceding the sheet number TQ 058
- Take the west edge of the grid square in which the point lies and read the figures opposite that line on the north or south margin. Estimate tenths of metres from the grid line to the point (distance in metres). The resulting four figure number is the Easting. 291
- Take the south edge of the grid square in which the point lies and read the figures opposite that line on the east or west margin. Estimate tenths of metres from the grid line to the point (distance in metres). The resulting four figure number is the Northing. 291
- The full ten metre reference is given by joining the letters followed by the Easting and then by the Northing. TQ 05882916
