NATIONAL GRID REFERENCE

The grid lines form part of the national grid and are at 100 metre intervals. To give a reference defining the position of a point to within 10 metres proceed as follows:

EXAMPLE: 4267 4267

4267 4267

EASTING: Take west edge of 100 metre square in which point lies and read the figures opposite this line on the north or west margin. Estimate tens of metres from grid line to the point.

NORTHING: Take south edge of 100 metre square in which point lies and read the figures opposite this line on the north or west margin. Estimate tens of metres from grid line to the point.

TEN METRE REFERENCE: SU 178388

For further information see 'An Introduction to the Projection for Ordnance Survey Maps and the National Reference System'.

AREAS

Area measurement is to plan edge only. The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4267 parcel number
1.807ha area in hectares
4.47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features joined for measurement of area. Limit of area within which individual parcels are not shown. To convert hectares to acres multiply by 2.471 05. To convert acres to hectares multiply by 0.404 69.

Imperial equivalents for metric boundary markings

0.91m	=	3ft
1.22m	=	4ft
