AREAS

Area measurement is to plan edge only. In hectares that and acres, is shown within each parcel of land.

The number and area, in hectares that and acres, is shown within each parcel of land.

EXAMPLE: 4.078 ha parcel number 1-50994 area in hectares 4.078 area in acres 10.078

When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features used for measurement of area.

Limit of area within which individual parcels are not shown.

To convert hectares to acres multiply by 2.471 05.

To convert acres to hectares multiply by 0.404 69.

NATIONAL GRID REFERENCE

The grid lines form part of the national grid and are in 100 metre intervals. To give a reference identify the position of a point to within 10 metres proceed as follows:

EXAMPLE: 5 in Syrencoth Penning

EASTING	NORTHING
Take west edge of 100 metre square in which point lies and read the figures opposite this line on the east or west margin.	Take north edge of 100 metre square in which point lies and read the figures opposite this line on the north or south margin.
Estimate east of metres from grid line to the point.	Estimate north of metres from grid line to the point.
