AREAS

Area measurement is to plan edge only. The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4267 parcel number
 1.829ha area in hectares
 4.47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features joined for measurement of area are not shown.

To convert hectares to acres multiply by 2.47105
 To convert acres to hectares multiply by 0.40469

NATIONAL GRID REFERENCE

The grid lines form part of the national grid and are at 100 metre intervals. To give a reference defining the position of a point to within 10 metres proceed as follows—

EXAMPLE: C in Choulston Ox Buildings

EASTING	NORTHING
Take west edge of 100 metre square in which point lies and read the figure opposite this line on the north or south margin.	Take south edge of 100 metre square in which point lies and read the figure opposite this line on the east or west margin.
Estimate tens of metres from grid line to the point.	Estimate tens of metres from grid line to the point.
