BOUNDARIES

AREAS

Area measurement is to plan edge only.
Enclosures or features joined for measurement of area.
The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4267 parcel number
1807ha area in hectares
4-47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.
Enclosures or features joined for measurement of area.
Limit of area within which individual parcels are not shown.
To convert hectares to acres multiply by 2.471 05
To convert acres to hectares multiply by 0.404 69

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:

- Take the two letters preceding the sheet number. TQ 058
- Take the west edge of the grid square in which the point lies and read the figure opposite that line on the north or south margin. 291
- Estimate tens of metres from the grid line to the point (distance). 8
- The resulting four figure number is the Easting. 0588
- Take the south edge of the grid square in which the point lies and read the figure opposite that line on the east or west margin. 291
- Estimate tens of metres from the grid line to the point (distance). 6
- The resulting four figure number is the Northing. 2916
- The full ten metre reference is given by writing first the Easting followed by the Northing and then by writing first the Easting followed by the Northing. TQ 05882916
