NATIONAL GRID REFERENCE

The grid lines form parts of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows—

EXAMPLE from sheet TQ 0529

- Take the two letters preceding the sheet number: TQ 058
- Take the west edge of the grid square in which the point lies and read the figure opposite that line on the north or south margin: 058
- Estimate the number of metres from the grid line to the point (distance in): 8
- Estimate the number of metres from the grid line to the point (distance in): 291
- Take the south edge of the grid square in which the point lies and read the figure opposite that line on the east or west margin: 291
- Estimate the number of metres from the grid line to the point (distance in): 4
- Estimate the number of metres from the grid line to the point (distance in): 058

The resulting four figure number is the Easting and Northing. The resulting four figure number is the Easting and Northing. The resulting four figure number is the Easting and Northing. The resulting four figure number is the Easting and Northing.
