AREAS

Area measurement is to plan edge only. The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4.267 parcel number
 1.207ha area in hectares
 4.47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features joined for measurement of area are shown as one enclosure. The limit of area within which individual parcels are not shown is 2.471 05. To convert hectares to acres multiply by 2.471 05. To convert acres to hectares multiply by 0.404 69.

NATIONAL GRID REFERENCE

The grid lines form part of the national grid and are at 100 metre intervals. To give a reference defining the position of a point to within 10 metres proceed as follows—

EXAMPLE: H in Hare Covert

EASTING	NORTHING
Take south edge of 100 metre square in which point lies and read the figure opposite this line on the north or south margin.	Take west edge of 100 metre square in which point lies and read the figure opposite this line on the east or west margin.
Estimate tens of metres from grid line to the point.	Estimate tens of metres from grid line to the point.
