EXAMPLE: 8400 ..... parcel number  
 1-809ha ..... area in hectares  
 4-47 ..... area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features joined for measurement of area .....  
 Limit of area within which individual parcels are not shown .....  
 To convert hectares to acres multiply by 2.47105  
 To convert acres to hectares multiply by 0.4047

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100-metre intervals. To give a reference defining the position of a point to within 10 metres proceed as follows:-

EXAMPLE: G in Grimstead Beches (National Trust)

EASTING	NORTHING
Take west edge of 100-metre square in which point lies and read the figure opposite this line on the north or south margin	Take south edge of 100-metre square in which point lies and read the figure opposite this line on the east or west margin
Estimate tens of metres from grid line to the point	Estimate tens of metres from grid line to the point
