HEIGHTS are given in METRES above the Newlyn Datum. Bench mark lines which may contain later levelling information, also particulars of bench marks to which no such levelling has been shown, are taken as reliable from the Director General's Ordnance Survey.

The representation of a plain of a road track or path is evidence of the existence of a right of way. The alignment of tunnels where shown is approximate.

Imperial measurements for metric boundary measurements: 9.75m = 31, 5.49m = 18ft.

**AREAS**

Area measurement is to plan edge only. The number and area in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4.26 ha parcel number 123456789 area in hectares 4.26 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features joined for measurement of area. Lines of area within which individual parcels are not shown.

To convert hectares to acres multiply by 2.471 05. To convert acres to hectares multiply by 0.404 69.

**NATIONAL GRID REFERENCE**

The grid lines form part of the national grid and are at 100 metre intervals. To give a reference defining the position of a point or within 10 metres proceed as follows:

EXAMPLE: B in Best's Farm

**EASTING**  
 Take west edge of 100 metre square in which point lies and read the figures opposite this line on the north or south margin. Estimate tens of metres from grid line to the point.

**NORTHING**  
 Take south edge of 100 metre square in which point lies and read the figures opposite this line on the east or west margin. Estimate tens of metres from grid line to the point.
