**AREAS**  
Area measurement is to plan only. The number and area, in hectares (ha) and acres, is shown within each parcel of land.

**BOUNDARIES**  
Where the boundary of an Admin. Co. County Borough or Co. of City is coincident with that of a geographical county, the symbol for the latter is shown. County type boundary is usually coincident with civil parish boundary and the symbols for both are shown, e.g. Borough Comm. & Borough Bd. but where any other boundary coincides with that of a civil parish the symbol for the latter only is shown, e.g. Borough Comm. & Borough Bd. Co. Comm. & Ward Bd. Co. Comm. Bd.

**NATIONAL GRID REFERENCE**  
The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:  
1. Take the two letters preceding the sheet number.  
2. Take the west edge of the grid square in which the point lies and read the figure opposite the line on the north or south margin. Estimate tens of metres from the grid line to the point (distance x).  
3. Take the south edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin. Estimate tens of metres from the grid line to the point (distance y).  
The resulting four figure number is the Easting.  
4. The full ten metre reference is given by writing first the letters followed by the Easting and then by the Northing.
