AREAS

Area measurement is to plain edge only.

The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 8400 parcel number  
1.807ha area in hectares  
4.47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features posed for measurement of areas.

Limit of area within which individual parcels are not shown.

To convert hectares to acres multiply by 2.47105

To convert acres to hectares multiply by 0.4047

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a reference defining the position of a point to within 10 metres proceed as follows—

EXAMPLE: 2187

EASTING	NORTHING
Take west edge of 100 metre square in which point lies and read the figure opposite this line on the north or south margin.	Take south edge of 100 metre square in which point lies and read the figure opposite this line on the east or west margin.
Estimate tenths of metres from grid line to the point.	Estimate tenths of metres from grid line to the point.
