AREAS

Area measurement is on plan edge only.

The number and area in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 8400 ..... parcel number
1·809ha ..... area in hectares
4·47 ..... area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.

Enclosures or features joined for measurement of area .....

Limit of area within which individual parcels are not shown .....

To convert hectares to acres multiply by 2·47105

To convert acres to hectares multiply by 0·4047

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a reference defining the position of a point on within 10 metres proceed as follows:—

EXAMPLE: Hill in Hills Copse

EASTING: Take west edge of 100 metre square in which point lies and read the figures opposite this line on the north or south margin. Estimate tens of metres from grid line to the point: 3

NORTHING: Take south edge of 100 metre square in which point lies and read the figures opposite this line on the east or west margin: 212. Estimate tens of metres from grid line to the point: 1

TEN METRE REFERENCE: 2123 4441 SU 21234441
