Area measurement is to plan edge only. The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 1.800ha parcel number 4.477 area in hectares

When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features are used for measurement of area.

Limit of area within which individual parcels are not shown is 0.4047. To convert hectares to acres multiply by 2.47105. To convert acres to hectares multiply by 0.4047.

NATIONAL GRID REFERENCE

The grid lines form part of the Ordnance Grid and are at 100 metre intervals. To give a reference defining the position of a point to within 10 metres proceed as follows—

EASTING	NORTHING
Take west edge of 100 metre square in which point lies and read the figure opposite the line on the north or south margin. Estimate tens of metres from grid line to the point.	Take south edge of 100 metre square in which point lies and read the figure opposite the line on the east or west margin. Estimate tens of metres from grid line to the point.
