MADE AND PUBLISHED BY THE DIRECTOR GENERAL OF THE ORDNANCE SURVEY, SOUTHAMPTON.

Area measurement is to plan edge only. Enclosures or features joined for measurement of area. Limit of area within which individual parcels are not shown. To convert hectares to acres multiply by 2.47105. To convert acres to hectares multiply by 0.4047.

When identifying a parcel it is important to specify the number of the plan on which it falls. Example: 1-80/18 parcel number. 4-47 parcel in hectares.

Grid lines form part of the National Grid and are at 100 metre intervals. To give a reference defining the position of a point to within 10 metres proceed as follows:

EASTING		NORTHING	
Take west edge of 100 metre square in which point lies and read the figures opposite this line on the east or south margin	249	Take south edge of 100 metre square in which point lies and read the figures opposite this line on the east or west margin	251
Estimate area of metres from grid line to the point	249.4	Estimate area of metres from grid line to the point	251.7

For further information see 'An Introduction to the Projection for Ordnance Survey Maps and the National Reference System'.
