NATIONAL GRID REFERENCE
The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:
1. Take the two letters preceding the sheet number. (TQ 088291)
2. Take the west edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin. (088) Estimate size of metres from the grid line to the point (distance =) 291
3. Take the south edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin. (291) Estimate size of metres from the grid line to the point (distance =) 4
4. The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing. (TQ 088291.4)
For further information see 'An Introduction to the Projection for Ordnance Survey Plans and the National Grid System.'

VEGETATION CLASSIFICATION
Where space permits, trees and scrub symbols in woods are shown in groups of four, three, two or singly to indicate oak, beech, sycamore or mixed density of trees or scrub.
0.91m = 3ft.
1.8m = 6ft.

AREAS
Area measurement is to plan edge only.
The number and area, in hectares (ha) and acres, is shown within each parcel of land.
EXAMPLE: 4267.1 hectare number
1:809ha area in hectares
4:47 area in acres
When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features shown for measurement of area. Limit of area within which individual parcels are not shown. To convert hectares to acres multiply by 2.471 05. To convert acres to hectares multiply by 0.404 69.

EXAMPLE from sheet TQ 0829
TQ 088 291
088 291
088 291
