AREAS
 Area measurement is to the edge only.
 The number and area, in hectares (ha) and acres, is shown within each parcel of land.
 EXAMPLE: 1.807ha area in hectares
 4.427 area in acres
 When identifying a parcel it is important to specify the number of the plan on which it falls.
 Enclosures or features joined for measurement of area are not shown.
 Limit of area within which individual parcels are not shown.
 To convert acres to hectares multiply by 0.40469

NATIONAL GRID REFERENCE
 The grid lines form part of the National Grid and are at 100 metres intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:
 1. Take the two letters preceding the sheet number. EXAMPLE from sheet TQ 059
 TQ 058
 2. Take the west edge of the grid square in which the point lies and read the figure opposite the line on the north or south margin. 058
 3. Take the south edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin. 291
 4. The full ten figure reference is given by writing first the letters, followed by the Easting and then by the Northing. TQ 058291
