NATIONAL GRID REFERENCE

The grid lines from part of the National Grid are shown in 100m squares. To give a unique reference to any point on the map, the grid coordinates are given by a pair of numbers. The first number is the Easting and the second is the Northing. For example, the grid reference for the centre of the map is 7830 7930. This means that the point is 7830m east of the grid origin and 7930m north of the grid origin.

VEGETATION CLASSIFICATION

The symbols for vegetation are shown in the table below. The symbols are arranged in order of increasing cover. The symbols for trees and shrubs are shown in the table below.

	Trees		Shrubs
	Grass		Heath
	Moorland		Bog

Map used and published by the Director General of the Ordnance Survey, Southampton.

When identifying a point on the map, the grid coordinates are given by a pair of numbers. The first number is the Easting and the second is the Northing. For example, the grid reference for the centre of the map is 7830 7930. This means that the point is 7830m east of the grid origin and 7930m north of the grid origin.

When identifying a point on the map, the grid coordinates are given by a pair of numbers. The first number is the Easting and the second is the Northing. For example, the grid reference for the centre of the map is 7830 7930. This means that the point is 7830m east of the grid origin and 7930m north of the grid origin.
