AREAS
 Area measurement is to plan edge only.
 The number and area, in hectares (ha) and acres, is shown within each parcel of land.
 EXAMPLE: 1.809ha 4.47 acres
 4.47 parcel number
 1.809ha area in hectares
 When identifying a parcel it is important to specify the number of the plan on which it falls.
 Enclosures or features joined for measurement of area
 Limit of area within which individual parcels are not shown
 To convert hectares to acres multiply by 2.47105
 To convert acres to hectares multiply by 0.40469

NATIONAL GRID REFERENCE
 The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point in within 10 metres proceed as follows:
 EXAMPLE: from sheet TQ 0539
 1. Take the two letters preceding the sheet number TQ 0539
 2. Take the west edge of the grid square in which the point lies and read the figure opposite the line on the north or south margin 058
 Estimate tens of metres from the grid line to the point (distance a) 8
 The resulting four figure number is the Easting 0588
 3. Take the south edge of the grid square in which the point lies and read the figure opposite the line on the east or west margin 291
 Estimate tens of metres from the grid line to the point (distance b) 4
 The resulting four figure number is the Northing 2914
 4. The full ten metre reference is given by writing first the letters followed by the Easting and then by the Northing TQ 05882914
