Surveys of cliffs since the publication of this plan may be available. Enquiries should be addressed to the Director General or to the local Ordnance Survey office.

HEIGHTS are given in METRES above the Mean Sea Level.

Bench mark 132, which may contain laser levelling information and particulars of bench marks to which no value have been shown, are obtainable from the Director General, Ordnance Survey.

The representation of small creeks or paths is evidence of the existence of a right of way.

The alignment of sunshades shown is approximate.

Imperial approximations for metric boundary meanings
 0.91m = 3ft 12in = 4ft

AREAS

Area measurement is to plus edge only.

The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4267 parcel number
 1.900ha area in hectares
 4.7 acres area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.

Enclosures or features joined for measurement of area.

Limit of area within which individual parcels are not shown.

To convert hectares to acres multiply by 2.471 05

To convert acres to hectares multiply by 0.404 69

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metres intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows—

EXAMPLE from sheet TO 0529

TQ	058
058	272
058	8
058	8

1. Take the two letters preceding the sheet number.

2. Take the west edge of the grid square in which the point lies and read the figures opposite this line on the north or south margin.

3. Take the east edge of the grid square in which the point lies and read the figures opposite this line on the east or west margin.

4. The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing.
