NATIONAL GRID REFERENCE
 The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows—
 EXAMPLE: 4267000 2923000
 The first two letters preceding the sheet number—TQ
 Take the east edge of the grid square in which the point lies and read the figure opposite this line as the north or south margin—058
 Take the south edge of the grid square in which the point lies and read the figure opposite this line as the east or west margin—292
 The resulting four figure number is the Northing
 The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing—TQ 0582923000
 For further information see 'An Introduction to the Projection for Ordnance Survey Maps and the National Reference System'

Made and published by the Director General of the Ordnance Survey, Southampton.
 One grid square on this plan represents one hectare.
 AREA: Area measurement is to plain edge only. Enclosures or features joined for measurement of area, 4.47..... area in acres. To convert hectares to acres multiply by 2.471 05. To convert acres to hectares multiply by 0.404 69.
