**NATIONAL GRID REFERENCE**

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows—

EXAMPLE from sheet TQ 0529

- Take the two letters preceding the sheet number TQ 0529
- Take the west edge of the grid square in which the point lies and find the figure opposite this line on the north or south margin. In this example the figure is 058
- Take the south edge of the grid square in which the point lies and find the figure opposite this line on the east or west margin. In this example the figure is 291
- The resulting four figure number is the Northing

HEIGHTS are given in METRES above the Newlyn Datum.  
 Bench mark lists, which may contain level levelling information and particulars of bench marks to which no values have been shown, are obtainable from the Director General, Ordnance Survey.  
 The representation of the plan of roads, tracks or paths is not evidence of the existence of a right of way.  
 The alignment of tunnels where shown is approximate.
