EXAMPLE FROM SHEET TQ 0529
 The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:-
 1. Take the two letters preceding the sheet number. TQ 0529
 2. Take the west edge of the grid square in which the point lies and read the figures opposite this line on the north or south margin. 058
 3. Take the east edge of the grid square in which the point lies and read the figures opposite this line on the north or south margin. 058
 4. The resulting four figure number is the Easting. 0588
 5. Take the south edge of the grid square in which the point lies and read the figures opposite this line on the east or west margin. 291
 6. Estimate the area of metres from the grid lines to the point (distance in metres). 291
 7. The resulting four figure number is the Northing. 291058
 8. The full ten metre reference is given by writing first the Easting, followed by the Easting and then by the Northing. TQ 05882910
