**COMPILED DATA**

Levelled ..... 1952  
 Boundaries ..... Jun 1977

1:2500 scale \* 1:1250 scale (photographically reduced)  
 (a) Surveyed (b) Reconstituted from former County Series plans and revised

Surveys of changes since the publication of this plan may be available. Enquiries should be addressed to the Director General or to the local Ordnance Survey office.

Bench mark lists, which may contain later levelling information and particulars of bench marks to which no values have been shown, are obtainable from the Director General, Ordnance Survey.

The representation on this plan of a road, track or path is not evidence of the existence of a right of way.

The alignment of tunnels where shown is approximate.

**SYMBOLS**

	Non-coniferous trees		Cliff		Site of antiquity
	Coniferous trees		Cave entrance		Culvert
	Surveyed trees		Direction of water flow		Pylon
	Orchard trees		Electricity Transmission Line		Triangulation station
	Coppice scrub		Traverse station (permanent)		Bench mark
	Heath		Surface level		Revision point and bench mark coincident
	Bracken rough grassland		Archway		
	Marsh		Change of boundary marking		
	Reeds				

**BOUNDARIES**

	Parish boundary		Region or Islands Area boundary
	County boundary		District boundary
	Civil Parish (England) boundary		Community (Wales) boundary
	Electoral Division boundary		Nox shown boundary
	Ward boundary		Electoral Division boundary (Scotland)
	Borough Council boundary		Constituency (Co or Bor) boundary
	Co. Council boundary		

Coincident boundaries are shown by the first appropriate symbol above, e.g.

For Ordnance Survey purposes County Boundary is deemed to be the limits of the parish structures whether or not a parish area adjoins.

**AREAS**

Area measurement is to plan edge only.  
 Estimate area in hectares (ha) and acres, as shown within each parcel of land.

EXAMPLE: 4267 ..... parcel number  
 1.809ha ..... area in hectares  
 4.47 ..... area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features joined for measurement of area are shown by a dashed line. To convert hectares to acres multiply by 2.471 05. To convert acres to hectares multiply by 0.404 69.

**NATIONAL GRID REFERENCE**

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:

EXAMPLE from sheet TQ 0529

1. Take the two letters preceding the sheet number. TQ 058

2. Take the west edge of the grid square in which the point lies and read the figures opposite this line on the north or south margin. 058

3. Take the east edge of the grid square in which the point lies and read the figures opposite this line on the east or west margin. 291

4. The full ten metre reference is given by writing first the letters, followed by the Easting, and then by the Northing. TQ 0582916

The resulting four figure number is the Northing. 2916
