AREAS
Area measurement is to plan edge only.
Enclosures or features joined for measurement of area.
The number and area in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE:
4.267 parcel number
1.807ha area in hectares
4.47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.
Enclosures or features joined for measurement of area.
Lines of area within which individual parcels are not shown.
To convert hectares to acres multiply by 2.471 05
To convert acres to hectares multiply by 0.404 69

NATIONAL GRID REFERENCE
The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows—
EXAMPLE from sheet TQ 0529

1. Take the two letters preceding the sheet number TQ 058
2. Take the west edge of the grid square in which the point lies and read the figure opposite (this line on the north or south margin) 08
3. Take the south edge of the grid square in which the point lies and read the figure opposite (this line on the east or west margin) 29
4. The full six metre reference is given by joining first the letters, followed by the Easting and then the Northing.
