 To convert hectares to acres multiply by 2.47105.
 To convert acres to hectares multiply by 0.40469.

NATIONAL GRID REFERENCE
 The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point or within 10 metres proceed as follows:

- Take the two letters preceding the sheet number.
- Take the west edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin.
- Estimate tenths of metres from the grid line to the point (distance in 100 metres).
- The resulting four figure number is the Easting.
- Take the south edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin.
- Estimate tenths of metres from the grid line to the point (distance in 100 metres).
- The resulting four figure number is the Northing.
- The full ten metre reference is given by writing the letters following the Easting and then by the Northing.
